

Practical No. 9

Title: Android program to work with images and videos

Aim: Create an application to demonstrate images and videos components

Introduction

Android provides many ways to control playback of audio/video files and streams. One of this way is through a class called **MediaPlayer**.

Android is providing MediaPlayer class to access built-in mediaplayer services like playing audio,video e.t.c. In order to use MediaPlayer, we have to call a static Method **create()** of this class. This method returns an instance of MediaPlayer class. Its syntax is as follows –

MediaPlayer mediaPlayer = MediaPlayer.create(this, R.raw.song);

The second parameter is the name of the song that you want to play. You have to make a new folder under your project with name **raw** and place the music file into it.

Once you have created the MediaPlayer object you can call some methods to start or stop the music. These methods are listed below.

```
mediaPlayer.start();  
mediaPlayer.pause();
```

On call to **start()** method, the music will start playing from the beginning. If this method is called again after the **pause()** method, the music would start playing from where it is left and not from the beginning.

In order to start music from the beginning, you have to call **reset()** method. Its syntax is given below.

mediaPlayer.reset();

Apart from the start and pause method, there are other methods provided by this class for better dealing with audio/video files. These methods are listed below –

Sr.No	Method & description
1	isPlaying()

	This method just returns true/false indicating the song is playing or not
2	seekTo(position) This method takes an integer, and move song to that particular position millisecond
3	getCurrentPosition() This method returns the current position of song in milliseconds
4	getDuration() This method returns the total time duration of song in milliseconds
5	reset() This method resets the media player
6	release() This method releases any resource attached with MediaPlayer object
7	setVolume(float leftVolume, float rightVolume) This method sets the up down volume for this player
8	setDataSource(FileDescriptor fd) This method sets the data source of audio/video file
9	selectTrack(int index) This method takes an integer, and select the track from the list on that particular index

10

getTrackInfo()

This method returns an array of track information

Exercise - Create android application to demonstrate images and videos components

Implementation:

Program:

MainActivity.java

```
package com.example.maxpromediaplayer;

import androidx.appcompat.app.AppCompatActivity;

import android.media.MediaPlayer;
import android.os.Bundle;
import android.view.View;
import android.widget.Button;
import android.widget.SeekBar;

import java.io.IOException;

public class MainActivity extends AppCompatActivity {

    private Button play;
    private Button pause;
    private SeekBar sb1;
    private MediaPlayer mp1;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);

        play=findViewById(R.id.button);
        pause=findViewById(R.id.button2);
        sb1=findViewById(R.id.seekBar);

        //mp1=MediaPlayer.create(this,R.raw.inspiring);
```

```
//mp1.start();
mp1=new MediaPlayer();
try {
mp1.setDataSource("https://www.soundhelix.com/examples/mp3/SoundHelix-
Song-1.mp3");
} catch (IOException e) {
    e.printStackTrace();
}

play.setOnClickListener(new View.OnClickListener() {
    @Override
    public void onClick(View view) {
        mp1.start();
    }
});

pause.setOnClickListener(new View.OnClickListener() {
    @Override
    public void onClick(View view) {
        mp1.pause();
    }
});

mp1.setOnPreparedListener(new MediaPlayer.OnPreparedListener() {
    @Override
    public void onPrepared(MediaPlayer mediaPlayer) {
        mediaPlayer.start();
        sb1.setMax(mp1.getDuration());
        sb1.setOnSeekBarChangeListener(new
SeekBar.OnSeekBarChangeListener() {
            @Override
            public void onProgressChanged(SearchBar seekBar, int i,
boolean b) {
                if(b) {
                    mp1.seekTo(i);
                }
            }

            @Override
            public void onStartTrackingTouch(SearchBar seekBar) {

            }

            @Override
            public void onStopTrackingTouch(SearchBar seekBar) {
```

```

        }
        });
    }
});

    mpl.prepareAsync();

}
}

```

activity_main.xml

```

<?xml version="1.0" encoding="utf-8"?>
<androidx.constraintlayout.widget.ConstraintLayout
xmlns:android="http://schemas.android.com/apk/res/android"
xmlns:app="http://schemas.android.com/apk/res-auto"
xmlns:tools="http://schemas.android.com/tools"
android:layout_width="match_parent"
android:layout_height="match_parent"
tools:context=".MainActivity">

    <TextView
        android:id="@+id/textView"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_marginTop="156dp"
        android:shadowColor="#CD291D"
        android:text="MaxProMediaPlayer"
        android:textColor="#F42121"
        android:textSize="34sp"
